

Canadian farmers are global leaders in sustainable production. Our job is to have this valuable contribution to sustainable food production recognized and rewarded by the world's food industry.

Pulse Canada is looking for a **Manager, Sustainable Production**, to join the young and energetic team at its office in downtown Winnipeg. The position will be a key part of Pulse Canada's team focused on marketing the environmental sustainability of Canadian pulse production, and Canadian cropping systems in which pulses are grown. She/he will play a leadership role in the implementation of a strategy to increase pulse utilization through the development and implementation of an action plan for populating, showcasing and marketing the environmental performance indicators sought by leading international food companies and food industry coalitions.

**Key Qualifications:**

- Bachelor's or Master's degree in soil science, agronomy, or other field related to sustainable food and agriculture that demonstrates credibility within the scientific community focusing on sustainability metrics.
- Strong verbal and written communication skills, including presentation skills, suited to the scientific community as well as to audiences without background in agriculture or familiarity with Canadian cropping systems.
- Track record as a self-starter, having shown ingenuity in approaches to personal or professional challenges, and working well within a team environment.
- The ideal candidate will have professional experience resulting in an understanding of sustainability metrics, or extensive field work resulting in a sound understanding of commercial farming operations in Western Canada. Preference may be given to candidates who:
  - also have academic or professional experience in life cycle analysis, or in applying sustainability metrics such as carbon offsets, carbon footprinting, water use, or soil carbon/organic matter capture;
  - also have professional or academic experience in annual cropping systems outside Western Canada.
- Eligibility for membership as a professional Agrologist would be considered an asset.

This unique employment experience in an emerging field of international importance will begin immediately.
